Course overview

Data protection law continues to evolve rapidly, driven by judicial interpretation as much as legislative change. Courts in the UK, EU and other common law jurisdictions are increasingly shaping how the UK GDPR and related privacy frameworks operate in practice, with significant implications for organisations that collect, use or manage personal data.

This focussed update session reviews the most important data law cases decided in 2025, analysing what the courts have said about data breaches, cybersecurity failures, damages for distress, jurisdiction and territorial scope, the definition of personal data, data subject rights, and platform liability. Drawing on both UK and international decisions, the programme highlights emerging trends and areas of heightened enforcement and litigation risk.

Rather than a theoretical review, the session translates complex judgments into clear, practical insights. Attendees will gain a structured understanding of how recent case law affects compliance obligations, risk exposure and decision-making, and what organisations should be doing differently in response to these developments.

Benefits of attending
